

CLAIMS

1. A facility control monitoring method for monitoring a control performed by a control device in a facility including a device to
5 be controlled, the control device for controlling the operation of the device to be controlled, a setting device for transmitting a setting control value to the control device, and a sensor for transmitting an operational state measured value of the device to be controlled to the control device, the method comprising the steps
10 of:

storing the control procedure performed by the control device;
specifying an arbitrary date and time;

and

displaying predetermined steps of the control procedure after
15 the arbitrary date and time on a display device as a flowchart.

2. The facility control monitoring method according to claim 1, wherein flowcharts of different multiple lines are simultaneously displayed on one display screen of the display device.

20

3. The facility control monitoring method according to claim 1, wherein with a flowchart, a setting control value and a measured value obtained when control was carried out according to the flowchart, are simultaneously displayed on one display screen of
25 the display device as numerical values.

4. The facility control monitoring method according to claim 1, wherein a transition of the setting control value and the measured value obtained during the control was carried out according to the

flowchart are displayed on a display screen of the display device as a graph.

5. A facility control monitoring apparatus for monitoring a
5 control performed by a control device in a facility including a
device to be controlled, the control device for controlling the
operation of the device to be controlled, a setting device for
transmitting a setting control value to the control device, and
a sensor for transmitting an operational state measured value of
10 the device to be controlled to the control device, the apparatus
comprising:

a storage unit for storing the operation control values
transmitted to the device to be controlled and another control
equipment from the control device, and the setting control value
15 and the measured value which were changed with the lapse of the
transmission time of the operation control values;

a display device and an input device; and

control means for retrieving, based on a date and time input
value which is input through the input device and which specifies
20 an arbitrary date and time before input to the input device, the
control operation value at the date and time corresponding to the
specified date and time input value from the storage unit and for
making predetermined steps of the control operation value to be
displayed on the display device as a flowchart of the control
25 procedure.
